Digital Time Switches

:hager

Hager's Time Switches are recommended for command of lighting circuit, heating, water pumps and ventilation control. The range offers the use of different keys to adapt the programs to their installation. The program can be saved on PC and/or be transferred to a programming key via the EG003 software interface. A personalised file can be printed out for your customers. Thus all the project and programming information can be kept in the electrical distribution board.
